

## Cannon Problems

1. Robin Hood shoots an arrow with a speed of 49.0 m/s at an angle of  $30^\circ$  with the horizontal. a) What are  $V_x$  and  $V_y$ ?

$$V_x = V \cos \theta = 49 \cos 30^\circ = 42.4 \text{ m/s}$$

$$V_y = V \sin \theta = 49 \sin 30^\circ = 24.5 \text{ m/s}$$

- (b) How long after it is shot does the arrow reach the maximum height?

$$V_f = V_i + a t$$

$$0 = 24.5 - 9.8 t$$

$$-24.5 = -9.8 t$$

$$t = \frac{24.5}{9.8} = 2.5 \text{ sec}$$

|       | X    | Y      |          |
|-------|------|--------|----------|
|       |      | To Top | From Top |
| $V_i$ | 42.4 | 24.5   | 0        |
| $V_f$ | 42.4 | 0      | -24.5    |
| d     | dx   | dy     | dy       |
| a     | 0    | -9.8   | -9.8     |
| t     | 5.0  | 2.5    | 2.5      |

- (c) How high does the arrow go?

$$d_y = \frac{1}{2} a t^2$$

$$d_y = \frac{1}{2} (9.8) (2.5)^2 = 30.6 \text{ m}$$

- (d) How long until the arrow reaches the ground (from the time it was shot)?

$$t = 2 t_{(up)} = 2(2.5) = 5.0 \text{ Sec}$$

- (e) How far away from Robin Hood does it land?

$$d_x = V_x \cdot t = 42.4(5) = 212 \text{ m}$$

# Projectiles

2. In attempting a slam-dunk, Michael Jordan leaps into the air from the top of the key with a velocity of 7.62 m/s at an angle of  $40^\circ$  above the floor.

|       | X    | To Top | From Top |
|-------|------|--------|----------|
| $V_i$ | 5.84 | 4.90   | 0        |
| $V_f$ | 5.84 | 0      | -4.90    |
| d     | dx   | dy     | dy       |
| a     | 0    | -9.8   | -9.8     |
| t     |      |        |          |

- a) What are  $V_x$  and  $V_{iy}$ ?

$$V_x = 7.62 \cos 40^\circ = 5.84 \text{ m/s}$$

$$V_y = 7.62 \sin 40^\circ = 4.90 \text{ m/s}$$

- b) How high are his feet at the top of his jump?

$$\begin{aligned} T_{\text{up}} \rightarrow V_f &= V_i + at \\ 0 &= 4.9 - 9.8t \\ 9.8t &= 4.9 \\ t &= \frac{4.9}{9.8} = 0.5 \end{aligned}$$

$$\begin{aligned} d &= \frac{1}{2}at^2 \\ d &= \frac{1}{2}(9.8)(.5)^2 \\ d &= 1.23 \text{ m} \end{aligned}$$

- c) What is his "hang time?"

$$T_{\text{total}} = 2(T_{\text{up}}) = 2(0.5) = 1.0 \text{ sec}$$

- d) How far from the top of the key does he land?

$$dx = V_x \cdot t = 5.84(1) = 5.84 \text{ m}$$
