## More Kinematics + Freefall problems

1. A bullet from a rifle with a velocity of $330 \mathrm{~m} / \mathrm{s}$ is fired into a dense material that stops the bullet in a distance of 30 cm . What is the bullet's acceleration?

$$
\begin{aligned}
& \mathrm{V}_{\mathrm{i}}= \\
& \mathrm{V}_{\mathrm{f}}= \\
& \mathrm{d}= \\
& \mathrm{a}= \\
& \mathrm{t}=
\end{aligned}
$$

2. A bullet traveling horizontally with a velocity of $350 \mathrm{~m} / \mathrm{s}$ hits a board and passes

$$
\begin{aligned}
\mathrm{V}_{\mathrm{i}} & = \\
\mathrm{V}_{\mathrm{f}} & = \\
\mathrm{d} & = \\
\mathrm{a} & = \\
\mathrm{t} & =
\end{aligned}
$$ through emerging with a speed of $210 \mathrm{~m} / \mathrm{s}$. If the thickness of the board is 4.0 cm , how much time does it take for the bullet to pass through?

3. A student drops a ball from the top of a tall building; it takes 2.8 seconds for the ball to reach the ground.
a) What was the ball's speed just before hitting the ground?

$$
\begin{gathered}
\mathrm{V}_{\mathrm{i}}= \\
\mathrm{V}_{\mathrm{f}}= \\
\mathrm{d}= \\
\mathrm{a}= \\
\mathrm{t}=
\end{gathered}
$$

b) What was the height of the building?
4. A Boy throws a stone straight up with an initial speed of $15 \mathrm{~m} / \mathrm{s}$.
a) What is the maximum height the stone reached before it begins to fall back down?
b) What is the speed of the stone as it hits the ground?

$$
\begin{aligned}
\mathrm{V}_{\mathrm{i}} & = \\
\mathrm{V}_{\mathrm{f}} & = \\
\mathrm{d} & = \\
\mathrm{a} & = \\
\mathrm{t} & =
\end{aligned}
$$
