

Notes / Things to remember for the final:

1. On multiple choice questions, make sure to read all the choices especially if the first choice seems correct. The correct answer could be “all of the above”
2. Read all problems carefully, **look at axes labels on graphs**, don't assume anything.
3. You can write on the test so draw pictures and diagrams to help you solve problems.
4. Use equations to help you answer questions about relationships between variables.

Bring a calculator

Your phone must be put away and off – no ear buds

You will need a #2 pencil

I will not answer questions during the exam

You must finish in the given amount of time
